

Security Awareness Metrics Dashboard

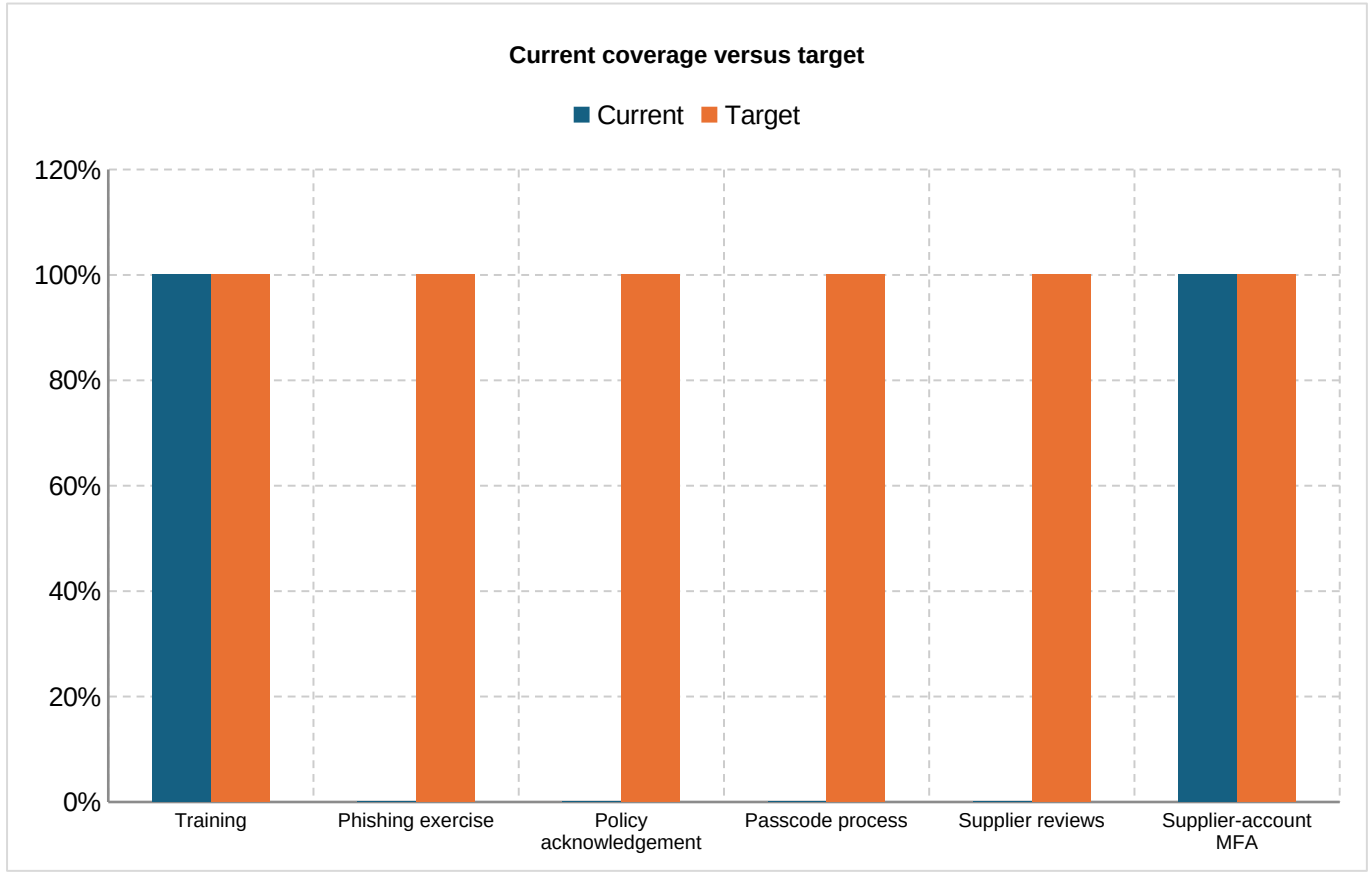

The Phone Boss ULTD | Annual review completed 09/13/2026

|                     |                                                                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Review period       | 09/14/2025–09/13/2026                                                                                                                  |
| Population          | One owner/operator                                                                                                                     |
| Review frequency    | Annual; update earlier after an incident, policy change, or addition of workers                                                        |
| Coverage definition | Six rate-based controls are used for coverage. Event counts are shown separately and do not increase the coverage result.              |
| Evidence limitation | No known phishing messages or incidents does not prove that none occurred because formal tracking did not operate for the full period. |

| Annual management update | Current position and next step                                                                                                                                                                                                                                                 |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Current position         | Formal security training is complete and MFA covers all six supplier accounts. No known phishing messages or security/privacy incidents were identified during the period.                                                                                                     |
| Next step                | The awareness program remains developing because no formal phishing exercise, approved policy acknowledgement, consistent customer-passcode process, or completed supplier reviews are evidenced. Complete the four actions and retain evidence before the next annual review. |

| Dashboard result                 | Value      |
|----------------------------------|------------|
| Controls meeting target          | 2          |
| Controls needing action          | 4          |
| Control coverage                 | 33%        |
| Known phishing messages          | 0          |
| Known security/privacy incidents | 0          |
| Overall status                   | Developing |

| Metric                 | Current | Target |
|------------------------|---------|--------|
| Training               | 100%    | 100%   |
| Phishing exercise      | 0%      | 100%   |
| Policy acknowledgement | 0%      | 100%   |
| Passcode process       | 0%      | 100%   |
| Supplier reviews       | 0%      | 100%   |
| Supplier-account MFA   | 100%    | 100%   |

| Action ID | Required action                                                                                             | Owner           | Target date | Status      | Closure evidence                                                  | Trigger / frequency              | Related metric  |
|-----------|-------------------------------------------------------------------------------------------------------------|-----------------|-------------|-------------|-------------------------------------------------------------------|----------------------------------|-----------------|
| AWA-01    | Approve and acknowledge the Project 5 policy pack.                                                          | Richard Vincent | 09/27/26    | Not started | Signed approval and acknowledgement record                        | Annual and after material change | MET-03          |
| AWA-02    | Establish customer passcode authorization, permitted-use and secure-destruction steps in the repair record. | Richard Vincent | 10/04/26    | Not started | Updated form and one completed sample with customer data redacted | Per repair and annual review     | MET-04          |
| AWA-03    | Complete and document one controlled phishing-recognition exercise.                                         | Richard Vincent | 10/13/26    | Not started | Exercise scenario, response, lessons learned and completion date  | Annual                           | MET-02          |
| AWA-04    | Complete and retain the six supplier-review checklists from Project 8.                                      | Richard Vincent | 10/18/26    | In progress | Six dated review decisions with evidence references               | Annual and at onboarding         | MET-05          |
| AWA-05    | Begin a simple phishing and security-incident log.                                                          | Richard Vincent | 09/27/26    | Not started | Controlled log, including zero-event annual review entry          | Per event and annual summary     | MET-07 / MET-08 |
| AWA-06    | Complete the next annual dashboard review.                                                                  | Richard Vincent | 09/13/27    | Not started | Updated dashboard, evidence references and management update      | Annual                           | All metrics     |

# Annual Security-Awareness Metrics

Assessment period: 09/14/2025–09/13/2026 | Population: one owner/operator

| Metric ID | Metric                                       | Type  | Numerator / count | Denominator | Current result | Target | Status       | Evidence basis                                    | Measurement limitation                                                             | Review frequency                 | Owner           |
|-----------|----------------------------------------------|-------|-------------------|-------------|----------------|--------|--------------|---------------------------------------------------|------------------------------------------------------------------------------------|----------------------------------|-----------------|
| MET-01    | Formal security training completion          | Rate  | 1                 | 1           | 100%           | 100%   | Meets target | Training completion evidence is available.        | Personal certificates are referenced, not embedded.                                | Annual                           | Richard Vincent |
| MET-02    | Documented phishing exercise completion      | Rate  | 0                 | 1           | 0%             | 100%   | Needs action | Informal phishing practice only.                  | No formal simulation or retained exercise evidence.                                | Annual                           | Richard Vincent |
| MET-03    | Information-security policy acknowledgement  | Rate  | 0                 | 1           | 0%             | 100%   | Needs action | Project 5 policy pack exists.                     | Policy pack has not been formally approved and acknowledged.                       | Annual and after material change | Richard Vincent |
| MET-04    | Customer-device passcode process established | Rate  | 0                 | 1           | 0%             | 100%   | Needs action | Owner response during Project 9.                  | No consistent authorization, use and destruction process exists.                   | Annual and after process change  | Richard Vincent |
| MET-05    | Supplier reviews formally documented         | Rate  | 0                 | 6           | 0%             | 100%   | Needs action | Project 8 covers six suppliers.                   | Reviews are in progress; none has complete retained due-diligence evidence.        | Annual and at onboarding         | Richard Vincent |
| MET-06    | MFA coverage across supplier accounts        | Rate  | 6                 | 6           | 100%           | 100%   | Meets target | Owner confirmed MFA on all six supplier accounts. | Configuration evidence should be referenced without exposing recovery information. | Annual and after account change  | Richard Vincent |
| MET-07    | Known business-email phishing messages       | Count | 0                 |             | 0              |        | Monitor      | No known phishing messages reported.              | Phishing activity was not formally tracked for the full period.                    | Per event and annual summary     | Richard Vincent |
| MET-08    | Known security or privacy incidents          | Count | 0                 |             | 0              |        | Monitor      | No known incidents reported.                      | A formal incident-monitoring process did not operate for the full period.          | Per event and annual summary     | Richard Vincent |
