

RICHARD VINCENT

GRC & SECURITY COMPLIANCE ANALYST | IT RISK | CONTROL ASSESSMENT

Atlanta Metropolitan Area | (404) 829-0570 | successwithrichardvincent@gmail.com
[linkedin.com/in/richvince](https://www.linkedin.com/in/richvince) | richvince.github.io/Richard-Vincent | github.com/RichVince

PROFESSIONAL SUMMARY

Security+ and Splunk-certified IT infrastructure professional with 10+ years of experience across network support, device repair, systems troubleshooting, and technical operations. Applied ISO 27001:2022 and NIST CSF 2.0 to an owner-operated small business by developing risk, control, policy, evidence, supplier-review, readiness, and corrective-action artifacts. Skilled in evaluating technical evidence, documenting control gaps, communicating business risk, and developing prioritized remediation recommendations.

CORE QUALIFICATIONS

GRC & Compliance: Risk assessment, control testing, gap analysis, Statement of Applicability, evidence mapping, supplier risk, policy development, audit readiness, CAPA, and remediation planning

Frameworks: NIST CSF 2.0, ISO 27001:2022, CIS Controls v8

Technical Risk: IAM, vulnerability management, security logging, incident analysis, network security, Windows event analysis

Tools: Splunk, Qualys VMDR, Qualys CSAM, Wazuh, Wireshark, Windows Event Viewer, Microsoft 365

INDEPENDENT GRC PORTFOLIO PROJECTS

THE PHONE BOSS ULTD - ISO 27001 & NIST CSF GOVERNANCE PROGRAM 2026

Owner-led security governance implementation for an operating small business

- Developed 10 connected ISO 27001:2022 governance artifacts covering ISMS scope and context, risk assessment, control applicability, policies, readiness testing, evidence ownership, supplier risk, awareness metrics, and corrective action.
- Built a scored information security risk register and treatment plan addressing customer-device custody, business accounts, cloud services, websites, suppliers, and operational dependencies; documented inherent and residual risk, owners, target dates, and closure evidence.
- Evaluated ISO 27001 Clauses 4-10 and selected Annex A controls, distinguished documented requirements from operating evidence, graded findings, and created an evidence map to support audit readiness.
- Completed a NIST CSF 2.0 Current and Target Profile across all six Functions and 22 Categories, assigned a conservative Tier conclusion, and developed a prioritized 10-action improvement roadmap.

SIMULATED ORGANIZATIONAL SECURITY ASSESSMENTS

2026

Fictional case studies created to demonstrate GRC assessment and documentation skills

- Completed five consulting-style security assessments covering identity and access management, logging and monitoring, vulnerability management, data protection, and security governance.
- Identified control gaps including orphaned accounts, incomplete MFA coverage, delayed patching, end-of-life systems, insufficient logging, and missing security policies.
- Mapped findings and recommendations to NIST CSF 2.0, ISO 27001:2022, and CIS Controls v8; developed risk findings, maturity assessments, and prioritized remediation roadmaps.
- Produced assessment documentation connecting observations to affected control areas, risk rationale, and practical remediation priorities for technical and business audiences.

SECURITY OPERATIONS INVESTIGATIONS - INDEPENDENT PORTFOLIO

2025-2026

- Investigated suspicious authentication activity, phishing, Windows security events, DNS activity, brute-force behavior, and network traffic.
- Used Splunk, Windows Event Viewer, Wazuh, and Wireshark to correlate events, analyze indicators, refine SPL searches, and communicate investigation findings.

PROFESSIONAL EXPERIENCE

THE PHONE BOSS ULTD (formerly The Phone Boss)

2019-Present

Owner / Device Repair Technician

Self-employed; operated concurrently with full-time employment from 2020-2023

Current Repair Operations | August 2023-Present

- Diagnose, repair, and refurbish 20+ smartphones and tablets per month, performing component replacement, charging-port work, basic soldering, hardware/software troubleshooting, and functional quality testing.
- Manage end-to-end business operations including customer intake, estimates, repairs, sales, purchasing, inventory, vendor sourcing, recordkeeping, and after-service support.
- Provide occasional computer, hardware, software, and connectivity support based on customer needs.

Earlier Field IT Services | 2019-August 2023

- Completed 10+ CCTV installations and delivered IT infrastructure projects involving Cat5/Cat6 routing, cable termination, patch panels, equipment racks, connection testing, and installation of servers and routers.

INTERCONNECTION POINT LIMITED

2020-2023

Senior IT Network Technician

- Supported enterprise networking, IT infrastructure, system administration, connectivity, and end-user operations across business environments.
- Contributed to network restructuring and recabling projects across multiple offices within a large industrial environment supporting thousands of employees.
- Installed and supported servers, routers, CCTV systems, structured cabling, patch panels, equipment racks, and associated network infrastructure.
- Routed and terminated Cat5/Cat6 cabling, tested connections, documented configurations, and resolved network, hardware, software, and account-access issues.

TECHCOM WIRELESS

2012-2019

PC/Mobile Repair Technician / In-House IT Support

- Diagnosed, repaired, and maintained computers while resolving hardware, software, and performance issues.
- Served as in-house IT support, troubleshooting network and connectivity issues and supporting server builds, maintenance, and day-to-day technology operations.
- Provided end-user support while balancing customer-facing PC repair responsibilities with internal systems support.

CERTIFICATIONS

CompTIA Security+ (2026) | Splunk Core Certified User (2026)

Google Cybersecurity Professional Certificate (2023) | Qualys VMDR & Vulnerability Management (2023)

Qualys CyberSecurity Asset Management (2023) | Cisco Network Defender Training (2026)

PROFESSIONAL TRAINING

PER SCHOLAS CYBERSECURITY PROGRAM

2026

Intensive full-time vocational cybersecurity training, approximately four months

- Completed hands-on training in network defense, security operations, vulnerability management, SIEM fundamentals, incident response, and risk principles.
- Analyzed security logs, Windows events, network traffic, and suspicious activity using Splunk, Wireshark, Windows Event Viewer, and related security tools.
- Earned CompTIA Security+ and Splunk Core Certified User credentials during 2026.

EDUCATION

High School Diploma

TECHNICAL SKILLS

Security & Analysis: Splunk/SPL, Qualys VMDR, Wazuh, Wireshark, Windows Event Viewer, vulnerability management, IAM, log correlation, phishing analysis

Systems & Networking: Microsoft 365, Windows, Linux, Cisco, TCP/IP, LAN/WAN, servers, routers, CCTV, Cat5/Cat6, patch panels, rack installation

Scripting & Data: Python, SQL, SPL

PORTFOLIO

Cybersecurity & GRC Portfolio: richvince.github.io/Richard-Vincent

Applied ISO 27001 governance program | NIST CSF 2.0 profile | Risk and control analysis | Audit evidence | Supplier risk | Security investigations | Splunk log analysis
